Activity #2: Community characteristics & orientation

Mahamed Bashir
#13 climate change
Feb 1 st , 2021

Instructions

Research the community you are most interested in exploring using links from the UN Sustainable Goals website (https://www.un.org/sustainabledevelopment/) and others. In your exhaustive research, answer the following.

Community characteristics							
Community life-cycle (current state)							
Where is your community in its life-cycle?	What you need to focus on:	Special needs					
☐ Just forming Need basic tools to connect, but not sure from there	Research and/or discuss the potential of some basic tools with members, explore what ideas it might give them, and see what they might bring in with them.						
☐ ▲ Self-designing Information stage, but with a strong sense of what it wants to accomplish	Contribute ideas to the design. Analyze systematically the implications of their community design for technology, infrastructure, and technology skills.	I looked at this app NM.earth on app store and it inspired me to design and develop my own tool embracing design idea from NM.earth but also integrating new things along the way to help community.					
☐ Growing & restless Ready to add new functionality to its tool configuration	Try to make this a community reflection and self-design event. Does their restlessness suggest a major change, such as a transition to a new platform?						
☐ Stable and adapting Just needing some new tools	How much disruption will the community tolerate? How will the new tools be integrated into or affect existing practices?						
Constitution							
Diversity: How diverse is the community?							
Topic Your notes							

What are the different		Highschool students -				
members and what are levels of participation?	their	Post-secondary students -				
revers of participation:		Adults(teache	rs, parents, etc)			
		Note:				
		High schoolers	s and post-secondary groups are most active group. This allows me to			
		target those g	roups and spread awareness amongst them.			
How spread apart is it in of location and time zon		_	ostly will be local area but will aim for global attraction once the local as been impacted.			
What language(s) do mo		The target members are diverse and different different languages, however main communication language will be English.				
What other cultural or o	other	language barr	ier. Community must understand how to use the app properly.			
diversity aspects may a your technology choice		Design friendly interface that is easy to follow.				
Openness: How connect	ted to th	e outside world	is your community?			
Topic			Your notes			
community? Does		secure n boundaries oth private &	I want the app to be both private and public space. As this app gets the user's location if he/she wants to offer car pool, the user can turn on/off his location.			
public spaces How does your community need to interact with other communities? Do you need common tools for sharing and learning with them?			communicate to interact with each through secure chat system. This			
Technology aspirations						
Technology savvy, tole thereof? What are the o			nat are your community's technology interests and skills and patience echnology factors?			
Topic		Your notes				
How interested is your community in technolog	gy?	Good simple user-interface. Easy to follow and interact with app.				
What is their capacity for learning new tools?	or	I am aiming for low threshold, high ceiling. This allows for newer member to learn and interact with the app easily and those who are more advance will have good capacity to learn and use the app.				
What is the range of ski their interests and/or sl diverse, could it cause of or distraction?	kills are	Want to minimize conflict/ distraction and try to make the app user-friendly so that community can spread awareness through the app and share the app with others.				

How tolerant are members of the adoption of a wide variety of tools?							Very tolerant as this is for Community based app. This app will allow people to come together and be a changing society.			
How many technological boundaries are they willing to cross, e.g. sign in to more than one web-based tool, learn to use new tools, or give up old favorites? This helps you understand what level of integration you need.						an	It should not be problem integration between different devices. The user data is stored in database. So, users would need to authenticated once per device. If the user is already signed in with a device then they use the app.			
What are your members' technology constraints (e.g., bandwidth, operating systems, etc.)?						ıs,	Security and privacy. The system needs to verify the users.			
How much time are members able to be online and from where (office, home, field)? Some people have limited online time, or are able to be online only in specific locations. Others are always on. Very diverse situations can affect participation					om eld)? ed to be ways	<u>.</u>	on, so others nearby can see	them on map and inte	ser wants to turn their location ract if they want to carpool. spread awareness, learn about	
Community orientation										
to t	Relevance to community: Use the range from 0 (no relevance) to 5 (high relevance) to determine what matters most to the community. Look at these from the perspectives of the different types of members (under "constitution"). Also discuss the "value-added" to each member group									
0	1	2	3	4	5	Or	ientations	Variants	Key activities/your notes	
						Ma em wh act Me	eetings any communities place a great aphasis on regular meetings are members engage in shared ivities for a specific time. eetings, and the visible rticipation of members, assert e community's existence	☐ Face-to- face/blended ▲ ☐ Online synchronous ☐ Online asynchronous	Communities can organize events when things are back to normal.	
						Sor ong prii Op cor co- cor	me communities maintain going conversations as their mary vehicles for learning. en-ended conversations are mmon when a community is located and people keep the nversation going as they	☐ Single-stream discussions ☐ Multi-topic conversations ☐ Distributed conversations	Communities can chat and talk about climate changes as they ride together on the same car or meet at a climate change event	

			Projects In some communities' members want to focus on particular topics, go deep, and collaborate on projects to solve problems or produce useful artifacts. Learning is not just a matter of sharing knowledge or discussing issues. Members need to do things together in order to develop their practice. Projects usually involve a subgroup within the community	□ Practice groups□ Project teams□ Instruction	As mention above, communities can organize event within their local communities and spread awareness to people who are not aware of climate change.
			Content Some communities are primarily interested in creating, sharing, and providing access to documents, tools, and other content. Valuable and well-organized content is a useful resource for members	☐ Library ☐ Structured self- publish ♣ ☐ Open self-publish ☐ Content integration	As the app will be used to educate and spread awareness, it would be useful to provide useful information that user can access and share with others
			Access to expertise Some communities create value by providing focused and timely access to expertise in the community's domain, whether internally or externally. Communities with this orientation focus on answering questions, fulfilling requests for advice, or engaging in collaborative, just-in-time problem solving	☐ Questions & requests ♣ ☐ Access to experts ♣ ☐ Shared problem solving ♣ ☐ Knowledge validation ☐ Apprenticeship & mentoring	If the user of the app has any questions regarding about climate change then I can link with experts who can help community through UN Sustainable website. Or ask the user to submit a form with a question and provide this information to an expert who can then reply to the user's email.
			Relationships Some communities focus on relationship building among members as the basis for both ongoing learning and being available to each other. This orientation emphasizes the interpersonal aspect of learning together. Communities with this orientation place a high value on knowing each other personally, emphasizing networking, trust building, and mutual discovery	☐ Connecting ☐ Knowing about people ☐ Interacting informally ☐	This app allows to connect multiple people who have a common interest? Communities can interact with each other, this could be Neighbours sharing a ride, students going to school together or gathering an event and connecting people together locally and/or globally.
			Individual participation Learning together happens in the context of a group, but it is realized in the experience of individuals. People bring different	☐	Highly relevance because educating and spreading awareness starts within the person's home. If the individual can monitor their daily usage,

						styles, and aspirations to their participation in a community. People have different levels of commitment, they take on different roles, and they use tools differently	☐ Multi-membership	change, knows about what would happen if we neglect climate change, this individual can spread awareness and educate those people around him. It all starts with individual homes then impact society.	
						Community cultivation Some communities are happy with loose self-organization and unplanned evolution, while others thrive on attention to community cultivation. They have a need to reflect on the effectiveness and health of the community to make things better, joined with a willingness to work on it	□	-The app should be flexible for changes and be to integrate with changesBe able to design and develop software app where community thrive and help each other spread education and awareness. This works effectively when community are delighted with tool, they are using day-to-day.	
						In some cases, serving a specific context becomes central to the community's identity and the ways it operates. They may live inside an organization, whose charter their practice needs to serve. They may have a mission to provide learning resources to the world or to recruit members widely. Or they may seek interactions with other communities whose domain complements their own	☐ ♣ Organization as context ☐ Cross- organizational ☐ Other related communities ☐ Public mission	Important to keep in mind while designing application in this term because my goal for this project is to provide resource and knowledge to the community and ways, they can reduce their carbon footprint.	
Scratchpad (other interesting insights, questions/answers, etc.)
