PROJECT SCOPE STATEMENT

Project Name	Climate Awareness
Project Deliverables	

-[MVP-1]

-database preparation

- Firebase initialization

-create login/signup

- Login/Signup functionalities and verifying user.

-create navigation screen

- Creating four navigation screens where user can navigate each screen

-create questionnaires

- I want to ask couple questions to determine how much carbon footprint each user produce

-[MVP-2]

-create user profile and update based on results obtained from questionnaires

- After obtaining user results, then I can create badges and list of tasks the user can participate if their carbon usage was high. This includes personalized tips on how they can lower their impact on environment and use resources more efferently

-integrate maps dependencies and all other dependencies

- Want to finish integrating all the plugins I will mostly use for this project. E.g., google maps, firebase plugins, etc.

-[MVP-3]

-discovery page

- This page is resources page

where the user can access all the educational resources and can share with others.

- It includes ways to reduce carbon footprint, calculate carbon footprint, links to other useful resources with pdf format

-[MVP-4]

-work on chat screen includes

- Have each user communicate
- Create group chat
- Share documents together
- Have a forum posts accessible to all users?

-[MVP-5]

-Location services include:

- Getting user location
- Display users on the map
- Make map interactive so users can click

who's available,
request to share
ride, send a
message
- Show route
navigation when
user offers ride to
other users

Project Exclusions

This is the project scope I envisioned to get done. However, it's likely that I won't be able to finish all MVPs. So, whatever that I don't get done is excluded. For example, I don't get done MVP-5 which is implementing Location services then this will be excluded then this will be futures MVPs.
